1. Measurement precision, accuracy and reliability are dependent upon various factors including number of satellites, geometry, obstructions, observation time, ephemeris accuracy, ionospheric conditions, multipath etc. Figures quoted assume normal to favorable conditions. Times required are dependent upon various factors including number of satellites, geometry, ionospheric conditions, multipath etc. GPS and GLONASS can increase performance and accuracy by up to 30% relative to GPS only.
2. Might vary due to atmospheric conditions, signal multipath, obstructions, signal geometry and number of tracked signals.
3. Upgrade possibility to 240 channels including GPS L5 and BeiDou.
